WHAT IS BLACKBERRY CONNECT?

With BlackBerry Connect, you can use your Nokia device to access your email accounts from:

- Your company's network. If your company supports BlackBerry Connect, you can also look up email addresses from your company's electronic directory and synchronize your device's contacts and calendar with your contacts and calendar entries on your server account.
- An Internet Service Provider (ISP) or other email account (POP3, IMAP4).

An email account resides on a server to which emails are sent. The server then sends the emails to a client, such as your Nokia device or your desktop computer, where you can respond to them. You can also compose and send new emails from your device to the server, where they are distributed to other mobile devices and desktop computers.

Not all features of BlackBerry Connect are available on all devices or servers. Check with your system administrator about available features.

PREPARING TO INSTALL BLACKBERRY CONNECT

Before you install BlackBerry Connect:

- Contact your wireless service provider and request to have BlackBerry Connect service activated on your service plan.

Typically, your service provider asks for the telephone number of your device. Occasionally, the service provider requests the International Mobile Equipment Identity (IMEI) and personal identification number (PIN) of your device. In this case, you must install BlackBerry Connect before you request that the service be activated.

After you install BlackBerry Connect on your device, you can find this information by selecting Menu > BlackBerry > Settings. Then scroll right to Device Info where these codes are listed.

- Ask the service provider to enable your SIM card with general packet radio service (GPRS) or 3G.
- If you are using a corporate account, obtain your email address and BlackBerry activation password from the system administrator.

- Uninstall any older version of BlackBerry Connect. Be aware that when you remove BlackBerry Connect, all BlackBerry Connect messages and settings are removed from the Nokia device, but not from the email server. To remove BlackBerry Connect from your Nokia device:
 - 1 Press Menu and select Installations, then App. Mgr.
 - 2 Highlight BlackBerry.
 - 3 Select Options > Remove.
- Uninstall any other application that causes synchronization to occur. Synchronization is the process of moving information between your mobile device and your account on a server. Having more than one application that synchronizes this data might cause duplicate entries in your contacts, calendar, and other personal information.
- Before you use BlackBerry Connect, first read the user guide to become familiar with how your Nokia device works, including how to navigate to and access useful features. This guide does not tell you how to perform these tasks on your specific Nokia device model.

- Turn on your device and make sure you can make a call.

HOW TO INSTALL BLACKBERRY CONNECT

Installing BlackBerry Connect on your mobile device involves:

- Acquiring a BlackBerry Connect installation file.
- Using the file to install BlackBerry Connect.
- Setting up your device with an existing email account.

Acquiring BlackBerry Connect

You can acquire the BlackBerry Connect installation file in several ways, depending on your service provider. The file can come on a memory card; you can download the installation file from the Internet; your device might come with a BlackBerry Connect installation file on it.

If your Nokia device does not already have the BlackBerry Connect installation file on it, you can use your mobile device or desktop computer to download the installation file from the Web.

Downloading Directly on Your Device

To download BlackBerry Connect on your device:

- 1 From the browser of your Nokia device, visit <http://www.businesssoftware.nokia.com>.
- 2 Select the version of the BlackBerry Connect installation file and save it to your Nokia device.

Downloading on Your Computer

To download BlackBerry Connect on your computer browser:

- 1 Visit <http://www.businesssoftware.nokia.com>.
- 2 Select the version of the BlackBerry installation file for your device and save it to your computer.
- 3 Transfer the installation file from your computer to your device through Infrared, Bluetooth, data cable (requires installation of Nokia PC Suite), or through a memory card (requires a memory card reader). For more information about transferring files to your device, see the user guide that accompanies your device.

Installing BlackBerry Connect

After you transfer the file to your device, begin the BlackBerry Connect installation, as follows:

- 1 Turn on your mobile device.
- 2 Open the BlackBerry Connect installation file.
- 3 Select Yes when asked whether you want to install BlackBerry Connect.
- 4 Select Continue after you read the application information.
- 5 Select Yes when asked whether you want to activate BlackBerry Connect.

SETTING UP AN EMAIL ACCOUNT

With BlackBerry Connect, you can have email delivered to your device from:

- Your email account on your corporate server.
- An Internet Server Provider, or other email account (POP3, IMAP4).

Setting Up a Corporate Account

You can set up your device to send and receive email from your company's email server and to enable access to your company's directory. This

option requires that the company have a BlackBerry Enterprise Server as part of its email system.

Before Working With a Corporate Account

- Ask your IT department whether your company supports BlackBerry Connect with a BlackBerry Enterprise Server. If not, you need to set up a personal BlackBerry Connect email account by using BlackBerry Internet Service. See "Setting Up an Internet Account" on page 10.
- Make sure that you have turned on your Nokia device and can make calls.
- Make sure that BlackBerry Connect is activated on your device. (Go to Menu > BlackBerry > Settings > Connect. Check that BlackBerry Service is On.

Activating Your Account

After the BlackBerry Connect service is activated, you can activate your BlackBerry account.

Activating With Your Device

To activate your account over the air by using your device:

- 1 Select Menu > BlackBerry > Activation.

- 2 Enter the username and password that your system administrator provides.
The activation process begins and the information from your account on the server is transmitted to your device.

You are ready to continue when both the GPRS and BlackBerry icons are visible on the device display.

You can begin to send email once you see the account-activated message. Some of your information may still be synchronizing in the background, but this synchronization does not prevent sending and receiving email.

Activating With a Getting Started CD

If activating your account directly from your device is not an option, you might have to use the Getting Started CD that accompanies your device or that your system administrator provides.

To use the Getting Started CD to activate:

- 1 Insert the Getting Started CD into the CD drive on a desktop computer that is connected to your corporate Local Area Network (LAN).

- 2 Click the Install Software tab and select Install Nokia PC Suite and BlackBerry Configuration for Nokia. The wizards help you to:
 - Install Nokia PC Suite 6.7 or later to connect your device with your computer.
 - Install BlackBerry Connect Desktop for Nokia, which helps you configure BlackBerry Connect on your device.

To use the Getting Started CD to set up BlackBerry Connect to work with your corporate server account:

- 1 Connect your Nokia device to your computer with Nokia PC Suite.
- 2 Start the BlackBerry Connect Desktop application on your computer by double-clicking the BlackBerry Connect Desktop icon on the desktop. You can also start the application from the Start menu.
- 3 If prompted, select the email profile that you want to use, and select OK. To create a new profile, select New.
- 4 To establish connectivity between your Nokia device and the BlackBerry Connect Desktop application, click Configure Wireless Handset.
- 5 If prompted, create an encryption key by randomly moving your mouse.
- 6 Click Exit. BlackBerry Connect activates automatically.

Configuring Your Corporate Account

If you are using BlackBerry Internet Service, you do not need to use the BlackBerry Connect Desktop application, and you can proceed to "Setting Up an Internet Account" on page 10.

The BlackBerry Connect Desktop application lets you configure settings for using a device with a BlackBerry Enterprise Server. For example, you can create filters that specify which emails are sent to your device, create encryption keys to protect your privacy, and add a signature for emails that you send with BlackBerry Connect.

The BlackBerry Connect Desktop application must be used on a computer that is connected to the corporate LAN. If you want to set up your device or create encryption keys, you must also connect your device to the computer with PC Suite. If you just want to create filters or change the signature, you do not need to connect your device to the computer.

You can open the BlackBerry Connect Desktop application by double-clicking its icon on the desktop.

To receive emails on your Nokia device, make sure that Redirect Incoming Messages to Your Handset is checked.

To apply the changes you make in each tab of the BlackBerry Connect Desktop application, click Apply.

Creating a Signature

A signature is text that is automatically added to the emails you send by using BlackBerry Connect.

To create a signature, click the General tab, and enter the signature in the Automatically Include Your Signature On Outgoing Messages field.

If you do not want to use a signature, clear this field.

Creating Filters

You can determine which emails are forwarded to your Nokia device by creating filters.

To create filters:

- 1 Click the Filters tab.
- 2 Click New.

- 3 In the Filter Name field, enter a descriptive name for the filter.

In any of the From, Sent To, Subject, Body, Recipient Types, Importance, and Sensitivity fields, enter the properties that you want the filter to use. Separate multiple entries with a semicolon (;).

- 4 To forward emails detected by the filter to your Nokia device, select Forward Message to the Handset. To leave the detected emails on the server, select Don't Forward Message to the Handset.

- 5 Click OK.

Filters are used in the order that they are listed on the Filters tab.

To move a filter, select it and use the arrows to the right to move the filter to the desired position.

To disable a filter, clear the check box beside it.

Creating an Encryption Key

An encryption key protects your information while it travels between the BlackBerry Enterprise Server and your Nokia device.

To create an encryption key, click the Security tab and select one of the following:

- **Generate Keys Automatically.** BlackBerry Connect Desktop application reminds you to generate a new encryption key when needed. When prompted, move your mouse to generate the random information for the encryption key.
- **Generate Keys Manually.** BlackBerry Connect Desktop application does not remind you to generate a new encryption key.

To generate a new encryption key at any time, click Generate, and move your mouse randomly around the screen.

Setting Advanced Options

In the Advanced tab, you can specify the email address you want to use, select an email profile, select folders to redirect emails from, and specify if you want to save copies of the emails you have sent.

Specifying the Email Address

Your Nokia device uses the email address on the Advanced tab for communication. Verify that the address is correct. Typically, you should not need to modify this setting.

This email address is associated with a specific email profile. If you experience problems with email redirection, you might need to change your

email profile setting. You can change the email address only if your Nokia device is enabled on a BlackBerry Enterprise Server for Microsoft Exchange.

To change the email address, click Override Address, and enter the correct address.

Using an Email Profile

An email profile determines the specific behavior of your email. You can specify which email profile is used when you open the BlackBerry Connect Desktop application.

To change the profile settings, click Profile Settings in the email profile settings area. To select a profile when you open the BlackBerry Connect Desktop application, select Prompt For A Profile To Be Used.

To always use the same profile, select Always Use This Profile. Click OK and then click Apply.

Receiving Emails From Other Folders

By default, only emails that arrive in your Inbox on the server are forwarded to your device. However, you can specify that emails from other folders also be forwarded to your device.

To specify folder redirection:

- 1 Click Selected Folders in the Folder redirection area.
- 2 Click Choose Folders.
- 3 Select the folders you want. Make sure that you also select your Inbox.
- 4 Click OK and then click Apply.

Saving Sent Emails

Emails that you send from your Nokia device are saved in the Sent Items folder on the server. To change this behavior, select Don't Save A Copy To the Sent Items Folder.

Setting Up an Internet Account

If you want to receive emails from an ISP or a non-corporate email account, contact your Internet Service Provider for information about provisioning and setting up BlackBerry Internet Service.

If your service provider uses provisioning, then you might already have a provisioning message in your Inbox or a Web link placed in the Bookmarks list within the device browser. In this case, select the Web link within the provisioning message or bookmark list to access the provisioning Web Site. To complete the process,

you may need your PIN, IMEI number, and IMSI number. (In BlackBerry Connect, select Menu > BlackBerry Folder > Settings. Then scroll right to Device Info where these codes are listed.)

If your service provider does not use provisioning, then go to your service provider's BlackBerry Internet Service Web page.

WHAT'S NEXT?

When you are finished setting up BlackBerry Connect on your device to work with either a corporate server or an Internet Service Provider, refer to the *BlackBerry Connect 4.0 for S60 User Guide* for more information about using BlackBerry Connect.
